Commissioner of LCA study	**LCA consultant/Tool**
Kingspan Limited Holywell Facility Greenfield Business Park Bagillt Road Holywell CH8 7GJ UK	BRE LINA v2.0.8
Declared/Functional Unit	**Applicability/Coverage**
1 square meter of Quadcore Topdek insulated panel, used as a roof panel	Manufacturer specific product.
EPD Type	**Background database**
Cradle to Grave with options	ecoinvent

Demonstration of Verification
CEN standard EN 15804 serves as the core PCR [a]
Independent verification of the declaration and data according to EN ISO 14025:2010 ☐Internal ☒ External
(Where appropriate [b])Third party verifier: Nigel Jones
a: Product category rules b: Optional for business-to-business communication; mandatory for business-to-consumer communication (see EN ISO 14025:2010, 9.4)

Comparability
Environmental product declarations from different programmes may not be comparable if not compliant with EN 15804:2012+A1:2013. Comparability is further dependent on the specific product category rules, system boundaries and allocations, and background data sources. See Clause 5.3 of EN 15804:2012+A1:2013 for further guidance

Construction Product

Product Description

The KS1000 TD Topdek is a single component, factory pre-engineered roof deck, comprising a high performance single-ply PVC membrane with insulation and a trapezoidal steel deck, which is suitable for flat and pitched roofs above 1:80 (0.72°) after deflection. It is also suitable for curved roof applications with a convex curve (45m radius) and concave curve (50m radius). It is manufactured with an HCFC, CFC and HFC free IPN-QuadCore hybrid insulation core.

An air leakage rate of 3m3/hr/m2 at 50Pa or less can be achieved providing the entire building envelope is constructed using Kingspan insulated roof, wall and facades panels.

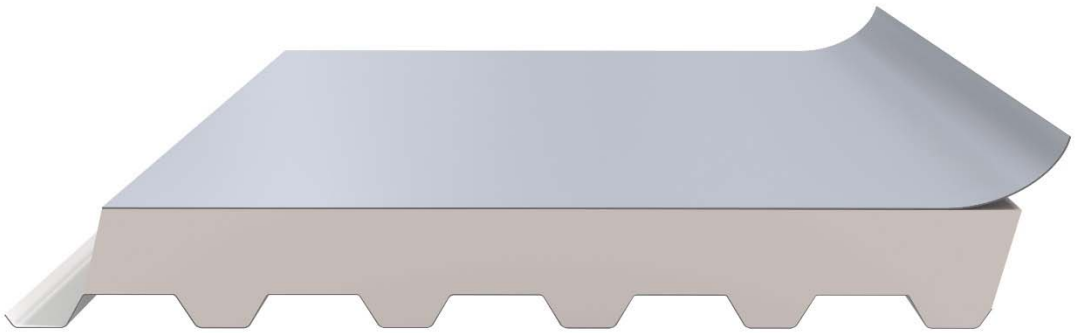
Panels are manufactured from the highest quality materials using state-of-the-art production equipment to rigorous quality control standards, complying with BS EN ISO 9001 standard, ensuring long-term reliability and service life. The panels are also being manufactured under Environmental Management System Certification BS EN 14001. Compliant to BS OHSAS 18001 Occupational Health and Safety. The panels are manufactured under ISO50001:2011 – Energy Management System.

The panels are CE marked to BS EN 14509: 2013. Structural load/span tables have been calculated using the method described in BS EN 14509: 2013 – self-supporting double skin metal faced insulated panels. U Values are in accordance with BS EN 14509, calculated using Finite Element Analysis, and takes into account any thermal bridging through longitudinal joint.

Technical data sheet available at: http://www.kingspanpanels.co.uk/resource-centre/

Technical Information

Property	Value, Unit
Core Thickness	120mm
Weight of Panel	12.5 kg/m²
U Value	0.14 W/m²K



Main Product Contents

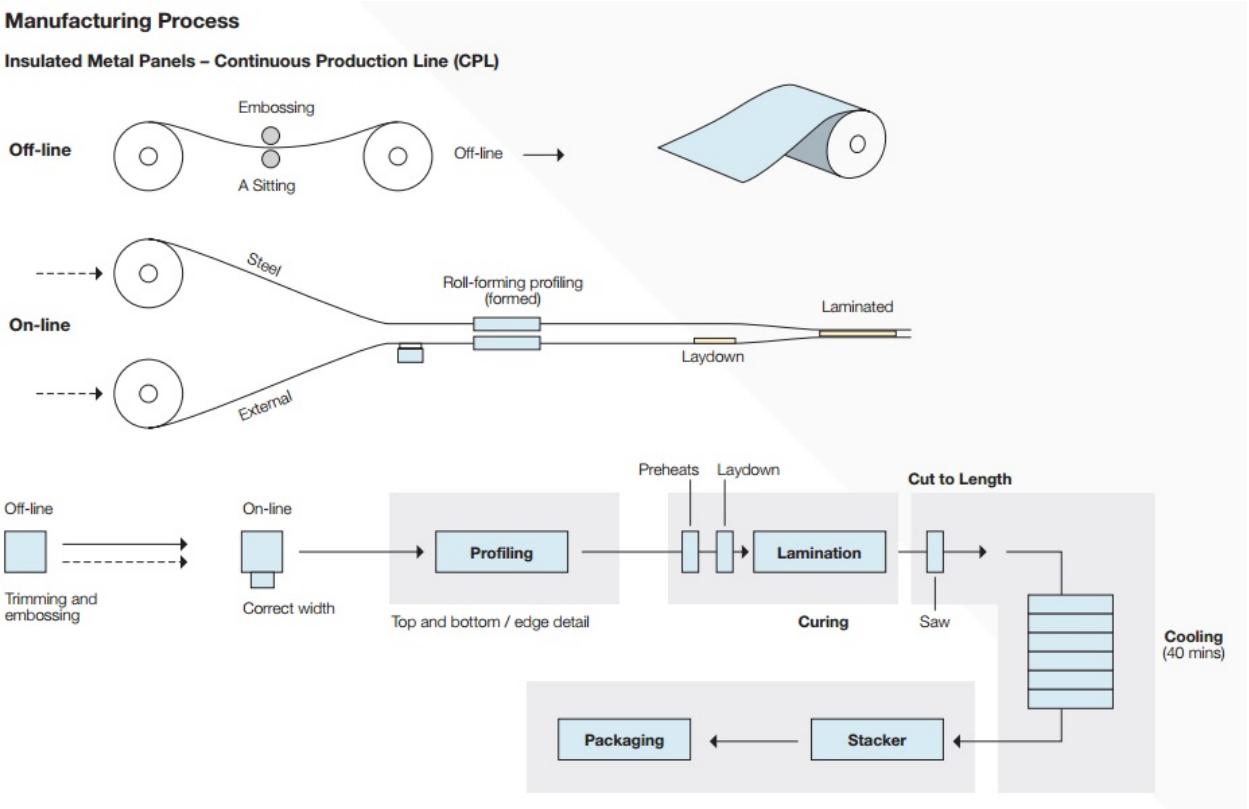
The values provided in the table below presents the average percentage of inputs

Material/Chemical Input	%
Internal Steel Liner	53
Insulation	30
External Membrane	17

Manufacturing Process

The manufacturing of insulated panels starts with the de- coiling of the internal and external liners. The liners are rolled into the desired profiled pattern. The foam formulation is then sprayed on to the internal liner and rises to meet the external liner creating a chemical bond between the two liner sheets. Protective film this then placed on both liners to protect the paint coating. The panel is then cut to the desired length and stacked until it has fully cooled. The panel is then packed for distribution.

Process flow diagram



Construction Installation

The insulated panels are made to order specific to the building's requirements. Installation guides are available to assist the contractor with correct installation of the product and any ancillaries (http://www.kingspanpanels.co.uk/resource-centre/results/?LiteratureType=26;27;31;33;36)

Use Information

There are no emissions to the environment from the use of the installed product.

End of Life

At the end of the panel service life if they product can not be re-used in another application, it is recommended that the panels are sent to a reclamation facility where the steel and membrane can be separated from the foam and be recycled. The foam can be used for waste to energy. It is not recommended that the panels are sent to landfill.

Life Cycle Assessment Calculation Rules

Declared / Functional unit description

1m^2 of Kingspan Quadcore Topdek roof panel over a 60-year study period.

System boundary

This is a cradle-to-gate with options EPD, therefore reporting all the life cycle stages (A1 to A3, A4, A5, C1-C4 plus module D) in accordance with EN 15804:2012+A1:2013.

Data sources, quality and allocation

The LCA study was carried out using BRE LINA v2.0.8. Manufacturer-specific data covering a production period of 10 months (1/01/18 – 31/10/18) derived from Kingspan Insulated Panels production process in Sherburn was used.

Kingspan Insulated Panels manufactures other finished productions at the Sherburn site in addition to the Quadcore Architectural wall panel product. Therefore all the primary data, including utilities and emissions, have been appropriately allocated to the declared product.

Secondary data for all other upstream and downstream processes are as provided within BRE LINA. The background LCI datasets are based on ecoinvent database v3.2. The tool has been pre-verified to conform to the modelling requirements of EN 15804:2012+A1:2013.

Cut-off criteria

No inputs or outputs have been excluded. All raw materials, packaging materials and consumable item inputs and associated transport to the plant, process energy and water use, direct production waste, and emissions are included.

Scenarios and additional technical information

Scenarios and additional technical information			
Scenario	Parameter	Units	Results
A4 – Transport to the building site	Panel product manufactured at the Sherburn site is transport by road to construction sites across the UK. Distance will vary depending on where the project is located so a 100km distance has been assumed scenario		
	Lorry (Diesel)	Litre of fuel type per distance or vehicle type	0.032
	Distance:	km	100
	Capacity utilisation (incl. empty returns)	%	32
	Bulk density of transported products	kg/m^3	12.5
A5 – Installation in the building	The scenario assumes steel fixing (1 fixing per 1m^2 of panel with an average weight of 0.0221kg) and sealant for the installation (5mmx4mmx1000mm = 20cm3 x 1.6= 0.32g/m3). On-site wastage of the product during installation has been estimated at 2%. A conservative estimate has been made informed by installers for the energy required for installing the steel fixings and the diesel requirement for the crane used to install the panels.		
	Material wastage rate	%	2
	Fixings (steel)	kg	0.021
	Sealant	kg	0.00032
	Electricity (for drill)	kWh	1
	Diesel (for crane)	kWh	2
	Waste sent to recycling (steel)	%	53
	Waste sent to incineration (foam)	%	30
	Waste sent to recycling (membrane)	%	17
Reference service life	A 40 year guarantee is given for the structural and thermal capacity of the product http://quadcore.kingspan.co.uk/pushing-the-envelope/		
	Description of scenario Reference service life	Years	40
C1 to C4 End of life,	For removal of the panels the scenario assumes the use of a crane (powered by diesel) to remove the panels and electricity for the drill (removal of fixings).		
	Diesel (for crane)	kWh	2
	Electricity (for drill)	kWh	1
	Transport to waste processing site - Lorry	Kg/tkm	0.032

Scenarios and additional technical information			
Scenario	Parameter	Units	Results
	Distance to waste processing site	km	100
	Capacity utilisation: to waste processing site	%	32
	Electricity to separate steel and insulation	kWh	0.81
	Waste to recycling (steel)	%	53
	Waste to incineration (foam)	%	30
	Waste to Recycling (membrane)	%	17
Module D	It is envisaged that end of life panels can be disassembled (i.e. separated into the foam and the steel components), with the steel components being used as scrap steel input in the manufacture of steel in secondary steel production using the electric arc furnace (EAF) method. The manufacture of secondary steel using EAF method displaces the production of the equivalent quantity of primary steel using the blast furnace (BOF) method, and by implication the need for virgin iron ore. This benefit (avoided impacts) arising from the potential reuse of the steel components of end of life insulation panels has therefore been modelled and reported per quantity of scrap steel obtained from 1 m2 of panel in this EPD. The relationship between the quantity of secondary steel that can be obtained from 1 unit of scrap steel through the EAF method, and the avoided BOF process including the equivalent quantity of virgin iron ore that is therefore saved is described in a publication by Leroy et al. (2014).		

Summary, comments and additional information

Sustainability Policy

Incorporate the ethos of sustainability into the vision and values of the organisation;

1. Continually improve operational performance through the setting of long term objectives and targets related to sustainability and review progress regularly;
2. Comply with and aim to exceed applicable legal and policy requirements related to the environmental and social aspects of the organisation;
3. Optimise energy and raw material usage and prevent or minimise pollution and environmental damage;
4. Continually monitor sustainability performance and actively communicate progress, in the form of a regular published Sustainability Report, using the Global Reporting Initiative (GRI) guidelines;
5. Communicate and actively promote awareness and acceptance of our sustainability policy to everyone working for or on behalf of the organisation (including employees, shareholders, suppliers/sub-contractors and customers);
6. Ensure employees are given adequate training in sustainability issues and are fully involved in helping deliver the Sustainability Vision and Policy;
7. Implement a Code of Conduct and supporting Sustainability Guidelines for key suppliers and contractors and other interested parties to ensure they comply with the Kingspan Insulated Panels' Sustainability Policy.

Environmental Policy

1. Comply with all environmental legislation;
2. Commit to the continual improvement and minimisation of environmental impact in all areas of our activities in line with best practice principles;
3. Commit to conduct our business in a manner that will prevent pollution and demonstrate respect for the environment;
4. Fully cooperate with any government agencies in finding solutions to environmental problems, resulting from our activities;
5. Manage an effective environmental documentation system to comply with the requirements of ISO 14001;
6. Provide environmental training for all employees, promote individual and collective respect and responsibility for the environment;
7. Maintain company and departmental monitoring programmes to ensure compliance with our policy, objectives and targets programme in line with our 'Reduce, Reuse, Recycle' ethos.
