

Statement of Verification

BREG EN EPD No.: 000406

Issue 02

This is to verify that the

Environmental Product Declaration

provided by:

CCL International

is in accordance with the requirements of:

EN 15804:2012+A1:2013

and

BRE Global Scheme Document SD207

This declaration is for:

1 kg of XU2 Monostrand Unbonded Post Tensioning Anchor System

Company Address

Unit 8,
Millennium Drive,
Leeds,
LS11 5BP

Emma Baker
Operator

Environmental Product Declaration

EPD Number: 000406

General Information

EPD Programme Operator	Applicable Product Category Rules
BRE Global Watford, Herts WD25 9XX United Kingdom	BRE Environmental Profiles 2013 Product Category Rules for Type III environmental product declaration of construction products to EN 15804:2012+A1:2013
Commissioner of LCA study	LCA consultant/Tool
CCL International Unit 8, Millennium Drive, Leeds, LS11 5BP	Pat Hermon BRE LINA v2
Declared Unit	Applicability/Coverage
1kg of XU2 post tensioning anchor	Product Average
EPD Type	Background database
Cradle to Gate	ecoinvent v3.2

Demonstration of Verification

CEN standard EN 15804 serves as the core PCR ^a

Independent verification of the declaration and data according to EN ISO 14025:2010

Internal External

(Where appropriate ^b)Third party verifier:
Nigel Jones

a: Product category rules

b: Optional for business-to-business communication; mandatory for business-to-consumer communication (see EN ISO 14025:2010, 9.4)

Comparability

Environmental product declarations from different programmes may not be comparable if not compliant with EN 15804:2012+A1:2013. Comparability is further dependent on the specific product category rules, system boundaries and allocations, and background data sources. See Clause 5.3 of EN 15804:2012+A1:2013 for further guidance

Construction Product

Product Description

The XU2 is an ETA-approved monostrand unbonded post-tensioning anchor system most commonly used in post-tensioned slab construction. It is used in buildings, bridges, containment and civil structures, as well as repair and strengthening applications. The anchor includes XU2-13 and XU2-15 for 13 mm and 15 mm nominal diameter strands respectively as described in ETA-19/0733.

The XU2 system covers the whole anchor assembly comprising the coated steel force transfer unit, the steel wedge, the plastic sleeve, the plastic nut and the plastic sealing cap.

Anchors are available in two sizes:

Anchor Assembly and Description	No. of strands	Anchor Assembly Weight (Kg)
XU2-13	1	0.72
XU2-15	1	1.13

This is an average EPD covering both anchor sizes produced over the course of 1 year.

Technical Information

Essential characteristics	Performance	Standard
Anchorage components	Section 1.2.2 and annex B-E	ETA-19/0733
Strand characteristics	Section 1.2.3.3, table 02 and annex A	ETA-19/0733
Prestressing forces	Section 1.2.3.4 and table 03	ETA-19/0733
Friction losses and anchorage wedge set	Section 1.2.5 and 1.2.6	ETA-19/0733
Mechanical resistance and stability	Section 2	ETA-19/0733

Main Product Contents

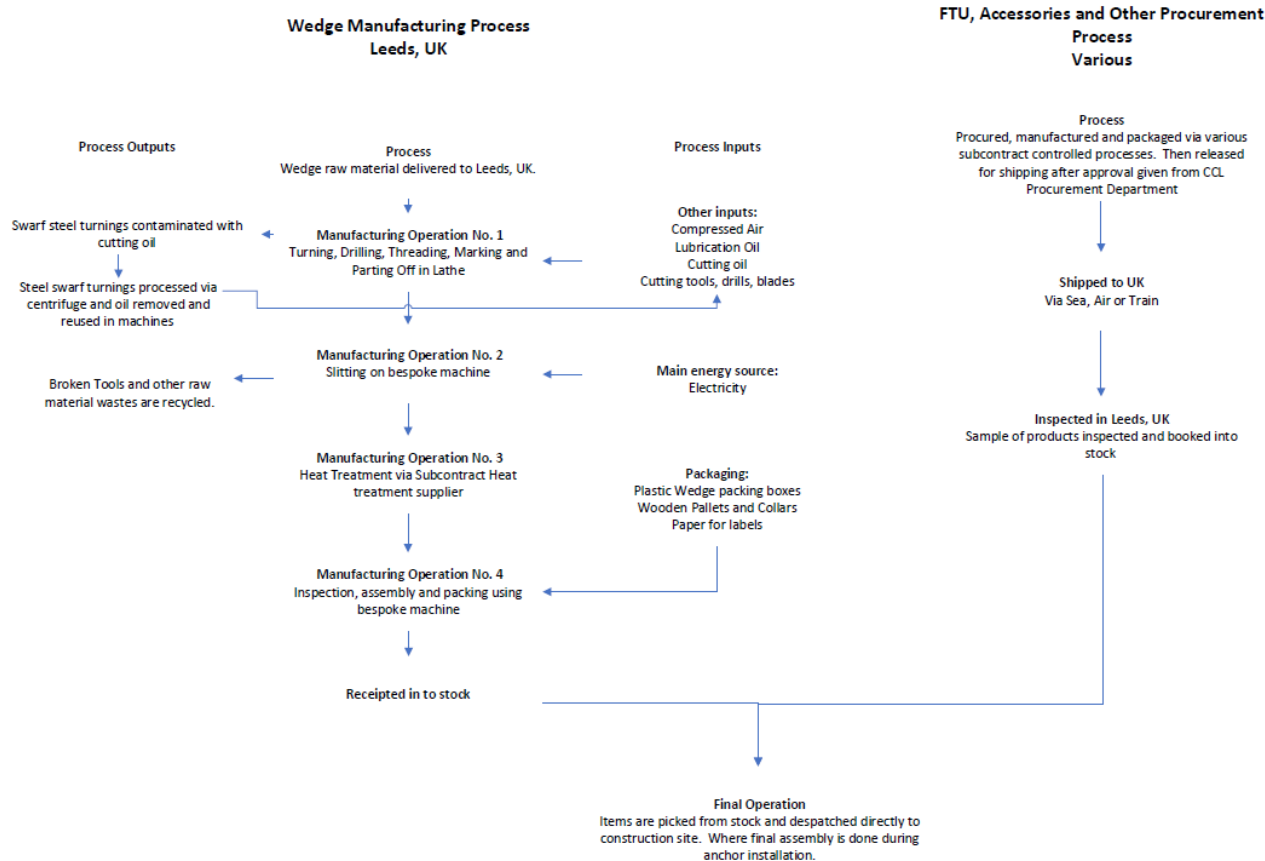

Material/Chemical Input	%
Steel	85%
Plastic	15%

Material composition of all products assessed within this average EPD

Manufacturing Process

Raw wedge material is delivered to the factory in Leeds where it undergoes turning, drilling, threading, marking and parting off in a lathe. Steel Swarf waste is processed and input back into the system. The wedges are then slitted, heat treated and then inspected before packaging and receipted into stock ready for dispatch.

Process flow diagram

Life Cycle Assessment Calculation Rules

Declared unit description

1 kg of XU2 anchor as used in precast and post tensioning concrete

System boundary

This is a cradle to gate EPD, reporting all production life cycle stages of modules from A1 to A3 inclusive in accordance with EN 15804:2012+A1:2013.

Data sources, quality and allocation

Data collected by CCL for the production of the XU2 Anchors for the period 1st January 2020 to 31st December 2020 has been used for this EPD.

Electricity consumption was determined by measuring the consumption on the manufacturing site for all production lines and weighted proportionally by production of XU2 anchors. The consumption of water is calculated based on the factual consumption.

Figures for the raw materials, ancillary materials and packaging were from actual usages. Allocation of energy, water, and waste has been done according to the provisions of the BRE PCR PN514 and EN 15804.

Secondary data has been drawn from the BRE LINA database v2.0.86. The background LCI datasets are based on ecoinvent v3.2 (2015) which was used for all other material energy and waste data requirements.

Cut-off criteria

All inputs or outputs have been included and all raw materials, packaging and transport, energy, water use and wastes, are included, except for direct emissions to air, water and soil, which are not measured. Upstream extraction and/or processing of inputs are included within the use of the background datasets within LINA.

LCA Results

(MND = module not declared; MNR = module not relevant; INA = indicator not assessed; AGG = aggregated)

Parameters describing environmental impacts

			GWP	ODP	AP	EP	POCP	ADPE	ADPF
