

Statement of Verification

BREG EN EPD No.: 000702

Issue 01

This is to verify that the
Environmental Product Declaration
provided by:
CLD Physical Security Systems

is in accordance with the requirements of:
EN 15804:2012+A2:2019

and
BRE Global Scheme Document SD207

This declaration is for:
**1m of Securus S1 fencing at a standard width of 2.5m,
weighing 24.5kg**

Company Address

Construction Product:

Product Description

CLD Securus S1 is made up of a single layer of rigid mesh. Tested and certified to LPS 1175 Issue 8 A1 (SR1) it is designed to withstand threats and attacks from a range of tools. This fencing system provides the peace of mind when there is a need to protect a high security site such as Data Centres, Prisons, MoD, Utilities, Ports & Airports.

The product is comprised of a single Layered rigid mesh system, fastened together with a full-length clamp bars. And can be provided in various heights between 1.8 and 5 meters. This EPD is based on 1m of Securus S1 product at 2.5m in width. As the materials used are consistent and have the same kg/m values for Securus S1 product at heights between 1.8 and 5 meters can be calculated.

Fixings include 120 x 5 mm full length steel clamp bars with M8 x 30mm (min) stainless steel cup square bolt. Panels come in a standard width of 2518 mm with a wire diameter of 4 mm and the mesh size of 76.2mm x 12.5mm, post dimensions of 80mm x 60mm x 3mm (corner posts 80 x 80) and all are part of the approved design.

Finish – Steel components are galvanised and then Polyester powder-coated to 60-80 microns or 160-200 microns with marine grade metallics. Customers can select any standard RAL colour available.

Technical Information

Standard	LPS 1175 A1 (SR1) Issue 8, BS1722-14: 2017, BS EN ISO 1461:2009, BS EN 13438:2013 Secured By Design
Panel Type	Mesh and wire. Single layered mesh system. High aluminium content, galvanised and powder coated to minimum 80 microns
Panel Width	2518mm
Wire diameter	4mm min
Mesh size	76.2 x 12.5 mm
Available heights	1800mm to 5000mm
Nominal heights	1.8m to 5.0m
Finish	Polyester powder-coated to 60-80 microns or 160-200 microns with marine grade and metallics. Any RAL colour available
Top edge protection	Barbed and razor wire, cranked and straight as additional options.
Panel installation	Maximum 50mm above final ground level. Base plated and ground bury options also available.
Post centres	2520mm
Posts	Special flanged Steel SHS post (80mm x 60mm standard) (80mm x 80mm corner posts) galvanised after manufacture and polyester powder-coated to match fencing
Fixings	120mm x 6mm full length clamp bar. M8 Stainless Steel cup square bolt (min 30mm)
Foundations	Set posts in holes minimum 450mm square x 950mm deep. Note: Contractor/client is responsible for the foundation size suitable for the ground conditions and fence height
Warranty	Minimum of 15 years against manufacturing defects.

Note: the technical information is derived from CLD Securus S1 Product data sheet and Q40 Specification, which can be downloaded on CLD website.

Property	Value, Unit
The Securus S1 product is independently tested by BRE and LPCB approved. LPS 1175 A1 (SR1) issue 8 (certificate No.999n)	LPCB certification is used to test resistance to unauthorised access offered by physical security products. The testing process is applicable to this Securus S1 product of heights between 1.8m and 5m
BS EN ISO 1461:2009 - Hot Dip Galvanized coatings on fabricated iron and steel articles.	ISO 1461:2009 specifies the general properties of coatings and test methods for coatings applied by dipping fabricated iron and steel articles (including certain castings) in a zinc melt (containing not more than 2 % of other metals).
BS EN 13438:2013 - Paints and varnishes. Powder organic coatings for hot dip galvanised or sherardised steel products for construction purposes.	Details requirements and test methods for organic coating of extrusions, sheet, and preformed sections for architectural purposes, using coating powders. It covers the pre-treatment, coating powder, coating process and the final product.

Main Product Contents

CLD Securus S1 fencing is constructed from mild steel mesh and posts which are then powder coated. With stainless steel fixings. The final finish is subject to customer specification dependant on the location of the intended installation. It is accepted that these main components detailed do not total 100% of the whole. This is due to there being other items in low quantities that would complete the sum total.

Material/Chemical Input	%
Mild steel box section	27.55%
Steel Mesh panels	46.60%
Steel clamp bars	23.73%
Stainless steel fixings	0.54%
Electrostatic powder coating	0.91%
Galvanise coating	0.64%

Manufacturing Process

The steel box section for posts / gates and the steel flat for the clamp bars and base plates are bought in as black steel before being cut to length and processed in our manufacturing department at Sandbach.

Processing generally involves cutting to size on either a saw or plasma/laser cutters and then Welding of the components to match approved drawings.

They are then taken for galvanising at local specialist companies. Once galvanised they are collected from galvanisers and returned to our manufacturing site to be prepped ready for powder coating. They are then taken to the powder coaters and the coated items are then sent directly to the Middlewich site for assembly and packing prior to being shipped to the customer.

Rigid Mesh panels are normally pre-galvanised, and powder coated in specified sizes / quantities / colours and sourced from our approved supplier. They are delivered to our Middlewich site where they are assembled, with the clamp bars into units ready for shipping and instal on site.

Where a customer requests a non-standard colour, mesh panels can be sourced as galvanised only and the powder coating is done at our local supplier.

Our two sites are spilt between Manufacturing / processing at our Sandbach site and assembly and shipping at our Middlewich site. Both sites require an amount of office work for our product with processing / design being done at Sandbach and logistics and transport being carried out at Middlewich.

General packaging materials include pallets, wooden bearers, plastic heat shrink wrap and banding. Fasteners are bought in from suppliers and packed with the fence panels at our Middlewich site.

Other products such as our plastic base tubs, Fibre safe panels, and Hoardsafe panels require no processing or manufacture. These are sourced from suppliers, delivered to Middlewich, and then shipped to the customer.

Process flow diagram

End of Life

The fence product is modular in construction and due to its nature will be outside. When deconstruction takes place individual panels/posts can be removed and stacked ready for transport. The product is made from steel and therefore can be recycled by an appropriate waste contractor. recycling can be completed locally with no need to return product to the manufacturing site.

Life Cycle Assessment Calculation Rules

Declared / Functional unit description

1 m of Securus S1 fencing at a standard width of 2.5m, weighing 24.5kg

System boundary

This is a cradle-to-gate with module C&D LCA, reporting all production life cycle stages of modules A1 to A3 and end-of-life stages C1-C4, and D. This LCA has been assessed in accordance with the modular approach as defined in EN15804:2012+A2:2019 and BRE Product Category Rules (PN 514 Rev 3.1).

Data sources, quality and allocation

Specific primary data derived from CLD Physical Security Systems' production process at its manufacturing facilities at Modsec House, Sandbach, Cheshire, CW1 3HL and at its assembly and logistics facilities at Brooks Lane, Middlewich, Cheshire, CW10 0JQ, have been modelled using the LINA A2 software and the ecoinvent 3.8 database. In accordance with the requirements of EN 15804:2012+A2:2019, the most current available data has been used. The manufacturer-specific data from CLD Physical Security Systems covers a period of one year (01/01/2023 – 31/12/2023). Secondary data has been obtained for all other upstream and downstream processes that are beyond the control of the manufacturer (i.e. raw material production) from the ecoinvent 3.8 database. All ecoinvent datasets are complete within the context used and conform to the system boundary and the criteria for the exclusion of inputs and outputs, according to the requirements specified in EN 15804:2012+A2:2019.

This LCA is for the 1m of Securus S1 fencing system (2.5m Width), the representative product accounts for 6.5% of the sites total production. The results can also be converted and fit to other Securus S1 product with a height range of between 1.8m and 5m as the variants have the same width, raw materials, and manufacturing process.

As CLD Physical Security Systems manufacture other products in addition to the Securus S1 fencing. An allocation of all energy, water and waste has been attributed to the Securus S1 fencing system based on its percentage of total production in meters. According to the provisions of the BRE PCR PN514 Rev 3.1 and EN 15804:2012+A2:2019. Site wide values for energy, water and wastewater have been taken from bills. Figures for the raw materials, ancillary materials and packaging were from actual usages.

For ancillary materials, silica sand has been used as a proxy for the grinding/finishing discs, as no appropriate dataset currently exists in Ecoinvent 3.8.

The energy data for galvanising and powder coating, which is the responsibility of third-party contractors, is not available. Therefore, the surface area of black steel is calculated, and generic ecoinvent datasets for galvanising and powder coating have been used to reflect their energy consumption. The transport of the third-party galvanising and powder coating has been covered in this LCA. The weights of galvanising coat and powder coat have been calculated and converted to kg from suppliers' data (kg/m²). Their weights have been reported in Module A1 of the LCA.

Quality Level	Geographical representativeness	Technical representativeness	Time representativeness
Very Good	Data from area under study.	Data from processes and products under study. Same state of technology applied as defined in goal and scope (i.e. identical technology).	Less than 3 years difference between the reference year according to the documentation, and the time period for which data are representative.

Specific UK datasets have been selected from the ecoinvent LCI for this LCA. The quality level of geographical and technical representativeness is therefore very good. The quality level of time representativeness is very good as the background LCI datasets are based on ecoinvent v3.8 which was compiled in 2021. Therefore, there is less than 3 years between the ecoinvent LCI reference year and the time period for which the LCA was undertaken.

UK 2022 Consumption mix was used for electricity with an emissions factor of 0.239kgCO₂e/kWh. UK Natural gas data (at industrial furnace) was used with an emissions factor of 0.232 kgCO₂eq/kWh.

Cut-off criteria

All processes associated with the manufacture of the product have been included. All inputs and of raw materials, ancillary materials, packaging, transport, energy, water use/discharge and waste have been included. The manufacturing process does not create any significant direct emissions to air, water or soil, therefore these are not measured. Upstream extraction and /or processing of inputs are included within the use of the background datasets within LINA.

Scenarios and additional technical information

Scenarios and additional technical information			
Scenario	Parameter	Units	Results
Reference service life	CLD Physical Security Systems guarantee that the Securus S1 product detailed above will be free from material or manufacturing defects for a period of 15 years from date of manufacture. So long as the system supplied is used in a perimeter fencing application and fixed to posts suitable for purpose.		
	Normal application and use	years	15
	Vandalism	years	0
	Acts of God	years	0
	Theft	years	0
C1 – Deconstruction	The Securus S1 Fence product is modular in construction and due to its nature will be outside. When deconstruction takes place individual panels/posts can be removed and stacked ready for transport. The product is made from steel and therefore can be recycled by an appropriate waste contractor. recycling can be completed locally with no need to return product to the manufacturing site.		
C2 – Transport from site to pre-processing facility or landfill	It is anticipated that post consumer product that has reached its end of life will be removed by road to local waste processing facilities. As these exist nationally there is no requirement to bring waste back to the site of manufacture. It is assumed that there would be suitable waste processing facilities within a reasonable distance of any site and so an estimate of distance has been made.	km	30 (estimate)
C3 - Pre-processing of uninstalled product	Steel product that requires no pre-processing to meet its end-of-life state. Industrial average end-of-life data of 'Fencing (posts, square section), steel (galvanized) & Fencing (wire mesh), steel (galvanized)' has been used according to BRE PCR PN 514 Rev 3.1, i.e. 95% of waste to recycling.		
	95% waste to recycling	kg	23.275
C4 – Disposal	There is currently no process in place to dispose of the product waste. Therefore, an industrial average end-of-life data of 'Fencing (posts, square section), steel (galvanized) & Fencing (wire mesh), steel (galvanized)' has been used according to BRE PCR PN 514 Rev 3.1, i.e. 5% of waste to landfill.		
	5% waste to landfill	kg	1.225
Module D	95% i.e. 23.275kg of product waste will be sent to recycling plant, out of which 8.526kg is post-consumer waste and hence only 14.748kg of steel waste is declared in Module D.		
	Existing Recycled Content (post-consumer)	kg	8.526
	Recovered for recycling	kg	14.748

Summary, comments, and additional information

Securus S1 at respective heights

The LCA results listed in the tables above are for 1m of Securus S1 fencing at a standard width of 2.5m, weighing 24.5kg. The end user can therefore use these results to calculate impact profiles for other heights of Securus S1 fencing with a standard width of 2.5m listed in the table below. The LCA results for each EN15804 indicator will need to be multiplied by the conversion factors. Ref: Figure 1 below.

Figure 1

Hight	Conversion factor
Securus S1 Fencing in 2.0M height	2.0
Securus S1 Fencing in 2.4M height	2.4
Securus S1 Fencing in 2.5M height	2.5
Securus S1 Fencing in 3.0M height	3.0
Securus S1 Fencing in 3.5M height	3.5
Securus S1 Fencing in 4.0M height	4.0
Securus S1 Fencing in 4.5M height	4.5
Securus S1 Fencing in 5.0M height	5.0

Interpretation

Out of the total mass of input materials, galvanised steel makes up 47%; followed by black steel of 51%; stainless steel, powder coating and galvanised coating make up the remaining of 1%. The bulk of the environmental impacts are attributed to the raw material supply stage, covered by information module A1 of EN15804:2012+A2:2019.

As a result, galvanised steel and black steel have very similar impacts, ranking first and second in terms of overall environmental impacts and are responsible for the greatest impact on GWP. Although the total mass and environmental impact of powder coating is very small, it contributes 100% of the impact on PENRM. Ref: Figure 2 below.
