

## Statement of Verification

BREG EN EPD No.: 000312

Issue 02

This is to verify that the

### Environmental Product Declaration

provided by:

**Kingspan Insulation Ltd**

is in accordance with the requirements of:

**EN 15804:2012+A1:2013**

and

**BRE Global Scheme Document SD207**

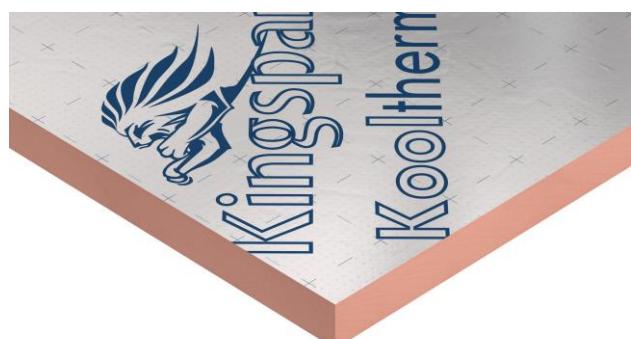

This declaration is for:

**Kingspan Kooltherm K3 Floorboard, K7 Pitched Roof Board, K8 Cavity Board, K12 Framing Board, K18 Insulated Plasterboard Baseboard**

## Construction Product

### Product Description

Kingspan Kooltherm K3 Floorboard, K7 Pitched Roof Board, K8 Cavity Board, K12 Framing Board and K18 Insulated Plasterboard Baseboard consist of a premium performance rigid thermoset fibre free phenolic insulation core faced on both sides with a low emissivity foil outer face.

Product information is available on [Kingspan.com](http://Kingspan.com)

### Technical Information

| Property                                     | Value, Unit   |
|--|---|
| Thermal Conductivity - EN 13166:2012+A2:2016 | 0.023 W/m.K (15-24 mm),<br>0.022 W/m.K (25-44 mm)<br>0.021 W/m.K ( $\geq$ 45 mm), |
| Compressive strength at 10% compression      | 100 kPa   |
| Board Size at range of thicknesses           | 1.2 x 2.4 m<br>1.2 x 0.45m  |

## Main Product Contents

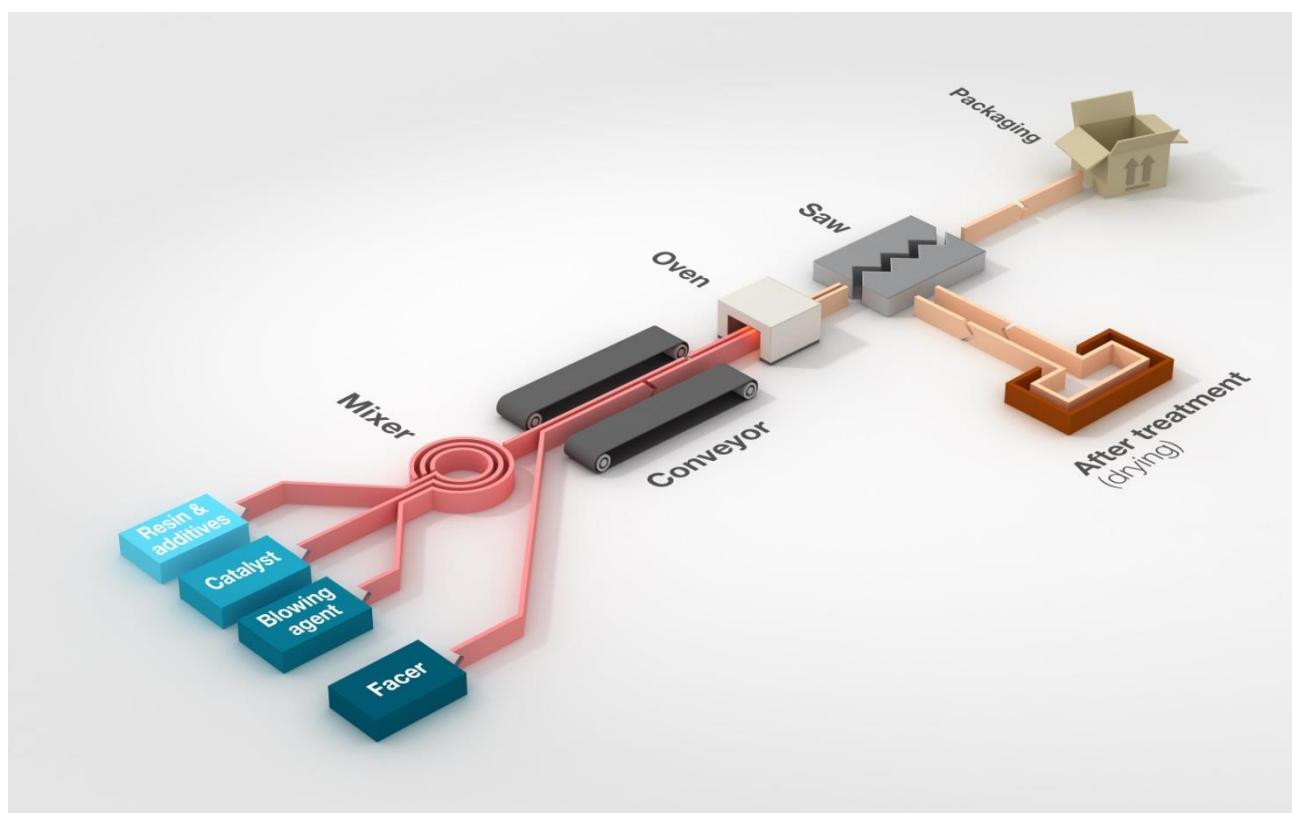

| Material/Chemical Input                             | %   |
|---|-----|
| Rigid thermoset fibre free phenolic insulation core | 87% |
| Low emissivity foil facer                           | 13% |

\*Average percentages applicable for 1m<sup>2</sup> of insulation at thickness that gives an R-value of 2.857m<sup>2</sup>KW

## Manufacturing Process

Kingspan Kooltherm is made through a manufacturing process in which a foam forms an insulating core between two facing elements. At the start of the process a mix of chemicals is added directly to the bottom layer of facing and then expands to meet the top layer of facing. As it dries, the foam becomes tacky and adheres itself to the facing, top and bottom. Once it has reached the necessary thickness the foam is cooked under pressure. It is then moved onto a secondary oven to cure and harden, becoming bright pink in colour. The insulation boards are then cut into the necessary sizes, packaged and sent to the loading bay for collection.

## Process flow diagram

## Construction Installation

The product will be installed in a variety of building wall, floor and roof applications using standard construction techniques.

## Use Information

The product will be left alone after installation, and there are no known associated environmental impacts.

## End of Life

The insulation will be removed for disposal when the building reaches the end of its life.

## Life Cycle Assessment Calculation Rules

### Declared unit description

1m<sup>2</sup> of insulation at a thickness that gives an R-value of 2.857m<sup>2</sup>.K/W (60mm)

### System boundary

Cradle to gate with options, Modules A1-3, A4, A5, C2, C3 and C4.

The following processes are included in the A1-A3 production stage of Kooltherm: Manufacture of preliminary products (resin, blowing agent, additives). Transportation of raw materials and preliminary products to the manufacturing site. Manufacturing process on the production site including, energy, disposal of residual materials, water consumption and VOC emissions to air.

The following process is included within the A4 construction stage: Transportation of the product to the construction site.

The following processes are included in the A5 construction stage of Kooltherm: installation wastage rate, material wastes produced by installation.

The following processes are included in C2, C3 and C4 stage of Kooltherm: End of life scenarios: Transportation of waste from the construction site to the waste processing plant, incineration of waste processing operations for recovery, waste sent to landfill.

### Data sources, quality and allocation

This EPD covers all Kooltherm K3, K7, K8, K12 insulation boards and K18 Insulated Plasterboard Baseboards manufactured at both the Pembridge and Castleblayney sites, representing 100% of production of these products in 2018 over all Kingspan production sites included in this EPD, and 1.5% of the total site output at the Pembridge site (361.07 tonnes), and 22.4% at the Castleblayney site (3018.43 tonnes).

A profile for the Kooltherm foam was created separately as this covered a range of Kooltherm products. The profile included all the impacts from the manufacture of the product, including all the data for the following sections: 'ancillary materials', 'packaging', 'fuel/energy', 'water', 'emissions to air, water and soil', 'production waste', 'other waste' and 'water discharged'. Allocation of these factors to the products was achieved by using a proportion of the total Kooltherm foam output. The foam profile was then used as an input for this (and other) end-product profiles.

Secondary data has been drawn from the BRE LINA database v2.0.64 and the background LCI datasets are based on Ecoinvent v3.2.

### Cut-off criteria

No inputs or outputs have been excluded. All raw materials, packaging materials, associated transport to the manufacturing site, and from the manufacturing site to the building site, process energy, water use, direct production waste, installation waste and emissions are included.

## Annex - Conversion factors to 1m<sup>2</sup> of insulation at the stated thickness

To convert the EPD results please use the following calculation methodology:

Environmental indicator life cycle result x Conversion factor

E.g. The calculation for GWP of A1-3 for 1m<sup>2</sup> insulation with a thickness of 30mm would be as follows: 4.11 x 0.42 = 1.17 kg CO<sub>2</sub> eq.
