

Statement of Verification

BREG EN EPD No.: 000530

Issue 01

This is to verify that the
Environmental Product Declaration
provided by:
HEMPEL A/S

is in accordance with the requirements of:
EN 15804:2012+A2:2019
and
BRE Global Scheme Document SD207

This declaration is for:
1 kilogram of Hempafloor Durable 300 (55160) paint

Company Address

HEMPEL A/S
Lundtoftegårdsvej 91
DK-2800 Kgs. Lyngby
Denmark

Manufacturing site(s)

The transport distances were adapted to the factory, specific transport distances for each provider were used for raw material transport. The manufacturing sites included in this EPD are:

Hempel Paints (Emirates) L.L.C
Interchange No. 08, Sajja Area,
Plot No 698/G Al Dhaid Road,
P.O.Box 2000,
Sharjah, United Arab Emirates.

Hempel Paints (Qatar) W.L.L.
Industrial Area, Street #16, Gate no # 212.
P.O. Box 3484, Doha.
Qatar

Construction Product:

Product Description

This EPD is representative for Hempafloor Durable 300 (55160).

Hempafloor Durable 300 (55160) is a two-component, UV resistance polyurethane paint based on aliphatic isocyanate with non-yellowing properties. Designed to protect concrete substrates exterior and interior in areas exposed to heavy abrasion such as car parks, garages and warehouses. It is a high performance, self-levelling product leaving a seamless surface.

The flexible coating surface can withstand the stresses that rubber tyres impart onto the flooring system. Also designed to use as UV-protective topcoat on Hempafloor epoxy-based paints to improve gloss retention. For enhanced slip resistance Hempafloor Anti-Slnt can be used for broadcasting in the system.

Hempafloor Durable 300 (55160) is recommended for exterior and interior industrial floors, Car park decks, high tech manufacturing facilities, warehouses, laboratories, hospitals, factories and hangars. It exhibits exceptional resistance to oil, dirt pick-up and grease.

Technical Information

Property	Value, Unit
Relative density	1.3 kg/l
Solids by volume	50 ± 2%
Dry film thickness	75 - 100 µm

Property	Value, Unit
Wet film thickness	150 – 200 µm
Theoretical spreading rate	6.7 – 5.0 m ² /l
Coverage	0.20 – 0.26 kg/m ²

Product Contents

The material composition of the declared mixed product:

Material/Chemical Input	%
Binder	50 – 75
Filler	<25
Pigments	<20
Additives	<5
Solvents	<20

Manufacturing Process

The manufacturing process for coatings involves combining and mixing multiple chemicals and materials into a homogenous product, which is then packaged and distributed.

Process flow diagram

End of Life

Coatings are typically disposed of with the substrate they are painted on. This can be through recycling, incineration or landfill, but the coating itself is unlikely to be separated from the substrate during the disposal process.

Life Cycle Assessment Calculation Rules

Declared / Functional unit description

1 kilogram of Hempafloor Durable 300 (55160) paint

System boundary

The chosen system has been Cradle to Gate with Modules C and D, which means that the Life Cycle Assessment is contemplated from the manufacturing of the paints until they leave the factory, considering the end-of-life stage and the benefits and loads beyond the system boundary.

Data sources, quality and allocation

To carry out this study, the time period October, 2021 - September, 2022 has been considered as the reference year.

The background databases are Ecoinvent v3.6 (2019) Database for the general model and CEPE Raw Material database v3.0 for raw materials. For electricity, the consumption electricity mixes from Ecoinvent v3.6 (2019) of the United Arab Emirates (0,535 kgCO₂e/kWh) and Qatar (0,524 kgCO₂e/kWh) have been used for Hempel's manufacturing sites in Sharjah (Emirates) and Doha (Qatar).

The quality of the data and the uncertainties associated with the inventories of each input are also analysed in accordance to Table E.1 of Annex E - Schemes to be applied for data quality assessment of generic and specific data of the EN 15804:2012+A2:2019 standard.

Cut-off criteria

For the present analysis, more than 99% of the mass and energy inputs and outputs of the system have been considered, leaving out diffuse emissions in the factory and the production of manufacturing infrastructure such as industrial machinery and equipment. On the other hand, those suppliers or manufacturers of raw materials that supply less than 5% of the total raw material consumption have been omitted. The remaining suppliers have been adjusted proportionally to 100% to balance this deficit.

Interpretation

The results displayed in Figure 1 apply to 1 kilogram of Hempafloor Durable 300 (55160) paint. It illustrates the relative contributions of the different modules assessed to various environmental impact categories and to primary energy use. Most impacts relate to the raw materials that compose the paint (included in Module A1-A3).

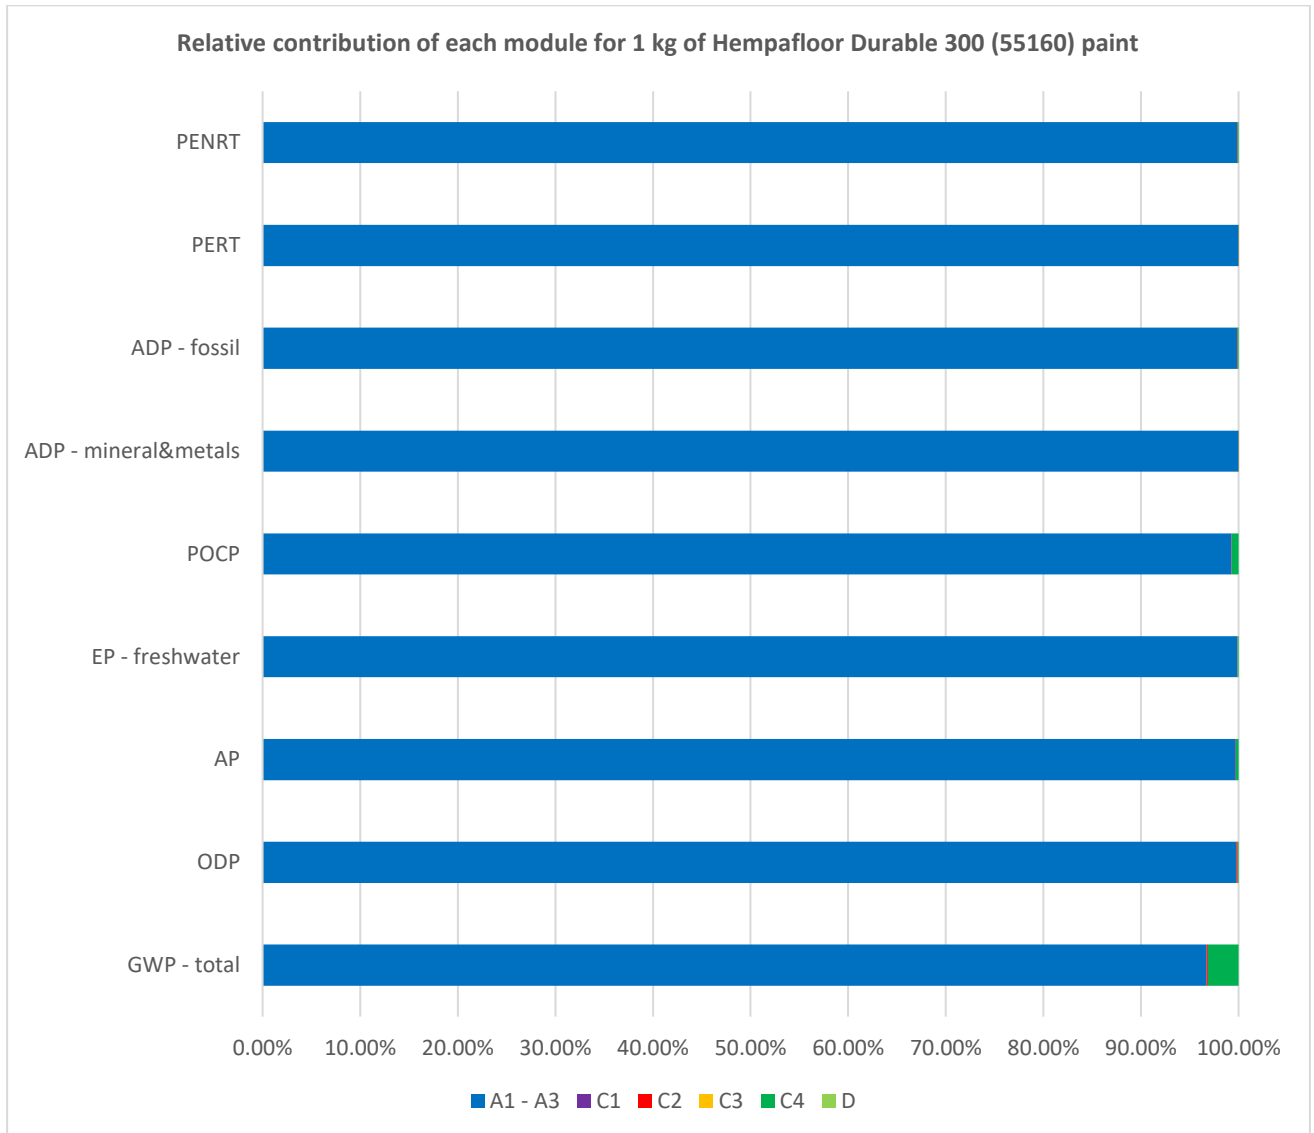

Figure 1: Relative contribution of each module for 1 kilogram of Hempafloor Durable 300 (55160) paint.

Raw material manufacturing and transport (72.79%), packaging (27.18%) and consumption (0.02%) account for the total of the use of renewable primary energy resources (PERT). The manufacturing of raw materials and its transport (93.21%) has the greatest impact on the use of non-renewable primary energy resources (PENRT), while the impact of the production process (due to fuel consumption and product packaging) measures 6.79%. The pre-product manufacturing (raw materials and its distribution) is the main contributor in all impact categories for Module A1-A3 with an average of 80.6%.
